CradlePoint has tested and certified that the following antennas provide the best mobile broadband performance with CradlePoint embedded and integrated modem products. These antennas work with all AER, ARC, and COR models that include an integrated modem, but in some cases may not be optimized for all frequency bands for a particular model (see individual antenna specs).

In most cases a single antenna connected to the main (primary) antenna port will provide sufficient gain. To see “true” 4G speeds on LTE – or better performance – 2 external antennas may be used (e.g., 2 antennas may provide 15 Mbps throughput and 1 antenna may only provide 8 Mbps throughput).

- The Mag-mount antennas (for vehicles or kiosks) can be attached to CradlePoint as shipped with 12.5 feet of cable and the correct SMA male connector.
- **Low loss coax cable with the N Male to SMA Male connectors OR an N Male to SMA Male adapter is REQUIRED to attach the outdoor mount antennas to CradlePoint.**

CradlePoint recommends JEFA Tech LL400-Flex cable with N Male, SMA Male connectors (not sold by CradlePoint). CradlePoint has tested and certified 20 and 50 foot cables from JEFA Tech ([jefatech.com/category/cradlepoint](http://jefatech.com/category/cradlepoint)). Loss is approximately 6 dB per 100 feet of cable (3 dB per 50 feet, 1 dB per 20 feet). For orders of 500+ units CradlePoint may be able to source cable at competitive prices.

If you don't require a longer cable, an **N Male to SMA Male adapter** can be purchased. JEFA Tech offers one: [jefatech.com/category/cradlepoint](http://jefatech.com/category/cradlepoint). The outdoor antennas only come with about 8 inches of cable.

CradlePoint recommends using **cable clamps** or other cable holding mechanism to secure low loss cable against the wall or pole. At least two clamps are recommended on the cable near the CradlePoint router. This construction helps reducing stress on cable/modem connector and increases product reliability. JEFA Tech provides a ½” cable clamp: [jefatech.com/category/cradlepoint](http://jefatech.com/category/cradlepoint).

Extra care must be taken while attaching the cable to the modem. **Be careful not to overtorque the SMA connector on the modem.** Finger tight is sufficient (the maximum torque spec is 7kgf-cm).

**Lightning protection** is also suggested (ensure you have correct connections). [jefatech.com/category/cradlepoint](http://jefatech.com/category/cradlepoint)
Antenna Main and Auxiliary Ports

In most cases a single antenna connected to the main antenna port will provide sufficient gain. To see “full” 4G speeds on LTE or for enhanced performance on any modem, 2 external antennas may be used.

Extra care must be taken while attaching the cable to the modem. **Be careful not to over-torque the SMA connector on the modem.** Finger tight is sufficient (the maximum torque spec is 7kgf-cm).

If using only a single antenna, you may want to turn off the auxiliary antenna port. Log into the administration pages and go to Internet → Connection Manager. Select the desired modem and click Edit. Select the Modem Settings tab. Deselect Enable Aux Antenna and click Submit.
CradlePoint Antenna Ordering and Installation Guide

12” Mag-mountain antenna with 12.5 foot cable

Part # 170605-000
6.1 dBi gain max

For use with all AER, ARC, and COR products with integrated modems.

NOTE: LTE band 7 (2600 MHz) not covered, which affects some international versions (LP2 and LP3 models).

Features
• Connect directly to CradlePoint with included cable and connector
• Multi-band versatility
• Easy to install 12” Magnet Mount Antenna
• Removable – transfer from one vehicle to another
• Omni-directional
• Weatherproof
• Made of stainless steel
• Requires metal mount plane (minimum 3.5 in. diameter)
• 12.5 feet of cable

cradlepoint.com
How It Works
CradlePoint’s Dual-Band Omni-Directional Antenna will collect the cell tower signal and send it through the cable to the integrated or embedded CradlePoint modem and router. When the modem transmits, the signal is transferred directly to the antenna and broadcasted back to the cell tower.

Installing the Magnet-Mount Antenna
Attach the Magnet-Mount Antenna to any metal area on top of the roof of the vehicle. The best location is clear of obstacles and as high on the vehicle as possible. Although small, the rare earth magnet is quite strong and won’t fall off at high speeds. Make sure the area under the magnet is clean so as not to damage the vehicle's paint and to ensure a strong connection. Bring the cable into the vehicle through a door frame – the cable is protected by the door’s rubber molding. Do not run the cable through a window because when the window is rolled up and the door is opened the antenna cable will be pulled – this is likely to destroy your antenna and/or scratch your paint. Connect the magnet-mount antenna cable to the CradlePoint router antenna port.

30-Day Money-Back Guarantee
All CradlePoint products are protected by CradlePoint’s 30-day money-back guarantee. If for any reason the performance of any product is not acceptable, simply return the product directly to the reseller with a dated proof of purchase.

90-Day Warranty
CradlePoint antennas are warranted for ninety (90) days against defects in workmanship and/or materials. Warranty cases may be resolved by returning the product directly to the reseller with a dated proof of purchase.

Antennas may also be returned directly to CradlePoint at the consumer’s expense, with a dated proof of purchase and a Returned Material Authorization (RMA) number supplied by CradlePoint. CradlePoint shall, at its option, either repair or replace the product. CradlePoint will pay for delivery of the repaired or replaced product back to the original consumer if located within the continental U.S.

This warranty does not apply to any antennas determined by CradlePoint to have been subjected to misuse, abuse, neglect, or mishandling that alters or damages physical or electronic properties.

Multi-Band Omni-Directional Antenna
50 ohm
Part # 170586-000

For use with all AER, ARC, and COR products with integrated modems.

NOTE: LTE band 7 (2600 MHz) not covered, which affects some international versions (LP2 and LP3 models), and poor performance for 2100 MHz, which affects some U.S. versions (LPE).

Features
• High-gain
• Weather resistant
• Built-in ground plane
• Slim and unobtrusive
• Mounting bracket included
• Installs easily
• For fixed installations
• About 8” of cable

cradlepoint.com
How It Works
CradlePoint’s Dual-Band Omni-Directional Antenna will collect the cell tower signal and send it through the cable to the integrated or embedded CradlePoint modem and router. When the modem transmits, the signal is transferred directly to the antenna and broadcasted back to the cell tower.

Thank you for purchasing a CradlePoint Antenna
Please read all instructions before installing your antenna, and check the parts supplied against those listed in this guide. CradlePoint’s weatherproof, fiberglass-encased antenna is omni-directional and ideal for many exterior building locations, such as homes, offices, stores and warehouses.

The innovative design results in high efficiency and low signal loss, which means more signal to your router’s modem. This multi-band, high-performance, omni-directional antenna supports multiple frequencies (specifications below). It is backed by CradlePoint’s 30-day money-back guarantee and 1-year limited warranty.

Package Contents
1 – Multi-Band Omni-Directional Antenna
1 – L-Bracket
1 – U-bolt assembly
1 – N Female – FME Male Connector
6 – Radials (3 short, 3 long)
4 – 10x1 Phillips round screws
1 – Thread-locker liquid

Determine Your Mounting Location
The antenna should be mounted high on the building with no obstructions. There is a compromise between installing the antenna as high as possible and keeping the cable run short to reduce signal loss. (The longer your cable, the greater the signal loss will be.) For cable runs of less than 20 feet (recommended), CradlePoint recommends JEFA Tech LL400 cable with N Male, SMA Male connectors (not sold by CradlePoint). CradlePoint has tested 20 and 50 foot cables from JEFA Tech and suggests using this configuration. Using less expensive (often higher loss) cables or using extra adapters with other cables may result in significantly reduced performance.

Make sure your mounting location is as far away as possible from other antennas and upright objects such as flagpoles. Be careful not to kink or crush the antenna cable or bend it tightly during installation. This can lead to poor performance and signal loss. It is important to mount the antenna vertically; mounting horizontally or at an angle will significantly degrade performance.

When two antennas are used, there must be at least 1’ (12 inches) separation between the edges of the two antennas. This spacing will provide enough spatial diversity in outdoor environment for MIMO/diversity operation.
Mount the Antenna
Apply a small amount of thread-locker liquid to the threads on each of the six radials and screw them into the holes at the base of the antenna. Attach the supplied L-bracket to a sturdy vertical surface using four screws. It may also be attached to a pole with the supplied U-bolt assembly (Figure 1). Remove the hex-nut and lock-washer from the base of the antenna, thread the antenna cable through the large hole in the L-bracket, slip the lock washer and hex-nut over the end of the cable and tighten against the underside of the L-bracket to hold the antenna securely (Figure 2).

Warning: Lightning protection is recommended for all installations (Not sold by CradlePoint). JEFA Tech offers one: [jefatech.com/category/cradlepoint](http://jefatech.com/category/cradlepoint). Wilson Electronics offers one compatible with this device: Wilson Part# 859988. Take extreme care to ensure that neither you nor the antenna comes near any electric power lines.

Connect the Cable
Attach the FME male to N female adapter to the antenna cable connector **FINGER TIGHT ONLY**. Connect the coax extension cable (sold separately) to the antenna cable (N male side), route the extension cable to the router location and connect to the modern antenna connectors (SMA male side).

CradlePoint Antenna Ordering and Installation Guide

Outdoor Panel Antenna
(Directionalc Patch)
Part # 170587-000

For use with all AER, ARC, and COR products with integrated modems.

Features
• High-gain
• Directional
• Pipe mounting hardware included
• Installs easily
• Weather resistant
• Wide bandwidth
• 50 Ohms
• VSWR: 2.0 max
• About 8" of cable

Disclaimer: The information provided by CradlePoint is believed to be complete and accurate. However, no responsibility is assumed by CradlePoint, Inc. for any business or personal losses arising from its use, or for any infringements of patents or other rights of third parties that may result from its use.
How It Works
CradlePoint’s Outdoor Directional Panel Antenna (Patch) will collect the cell tower signal and send it through the cable to the integrated or embedded CradlePoint modem and router. When the modem transmits, the signal is transferred directly to the antenna and broadcasted back to the cell tower.

Thank you for purchasing a CradlePoint Antenna
Please read all instructions before installing your antenna, and check the parts supplied against those listed in this guide. CradlePoint’s weather resistant, encased antenna is an outdoor directional panel antenna ideal for many exterior building locations, such as homes, offices, stores and warehouses.

The innovative design results in high efficiency and low signal loss, which means more signal to your router’s modem. This multi-band, high-performance, directional antenna supports multiple frequencies (specifications below). It is backed by CradlePoint’s 30-day money-back guarantee and 1-year limited warranty.

Package Contents
(A) Outdoor Panel Antenna
(B) Pole Mounting Bracket
(C) 3 – Small Washers
(D) 3 – Bracket nuts
(E) 1 – U-Bolt
(F) 1 – Pipe Bracket
(G) 2 – Washers
(H) 2 – 1/4” Split-Lock Washers
(I) 2 – 2 - 1/4”-20 nuts
Antenna Installation

The antenna should be mounted as shown in the illustration above. The included mounting bracket is adjustable and will accommodate pipe diameters from 1.25" to 2" (pipe not included). Mount the antenna so that there is at least 3 feet of clearance in all directions around it. Position the antenna so that it has the most unobstructed line of sight to the cellular service provider’s strongest signal. There is a compromise between installing the antenna as high as possible and keeping the cable run short to reduce signal loss. (The longer your cable, the greater the signal loss will be.) For cable runs of less than 20 feet (recommended), CradlePoint recommends JEFA Tech LL400 cable with N Male, SMA Male connectors (not sold by CradlePoint). CradlePoint has tested 20 and 50 foot cables from JEFA Tech and suggests using this configuration. FINGER TIGHT ONLY. Using less expensive (often higher loss) cables or using extra adapters with other cables may result in significantly reduced performance. When two antennas are used, there must be at least 1’ (12 inches) separation between edges of two antennas. This spacing will provide enough spatial diversity in outdoor environment for MIMO/diversity operation. Both antennas should focus the main beam in the same direction of strong cellular signal.

Warning: Lightning protection is recommended for all installations (Not sold by CradlePoint). JEFA Tech offers one: jefatech.com/category/cradlepoint. Wilson Electronics offers one compatible with this device: Wilson Part# 859988. Take extreme care to ensure that neither you nor the antenna comes near any electric power lines.

Adjusting the Antenna for Maximum Performance

To adjust the antenna for best performance, connect it to your router and log into the router (http://192.168.0.1) and access the modem signal strength page. Turn the antenna in 10-degree increments while checking the signal level (dBi). At each point you may need to wait a few seconds as the display updates. Signal readings appear as a negative number (for example, −86). The larger the number, the more powerful the signal (−75 is stronger than −84). Once you have obtained the strongest signal, fully tighten the mounting hardware. Disconnect the cable and route the extension cable to the router location and reconnect. Weatherproof all connections.

(B) 2 – U-Bolts
(C) 2 – Pipe Brackets
(D) 4 – 1/4" Washers
(E) 4 – 1/4" Split-Lock Washers
(F) 4 – 1/4"-20 nuts

Antenna Mounting Instructions
1 – Install U-Bolt (B) on pole.
2 – Slide Pipe Clamp (C) over U-Bolt (B) Flat side away from pipe.
3 – Slide antenna bracket (A) onto U-Bolt (B) in desired location.

Note: Antenna may be installed on a variety of pipe angles, insure antenna is pointing at cell tower and is vertical with the drip hole at the bottom.

4 – Install Flat washer (D), split lock washer (E) and nut (F), tighten as appropriate.

Note: A second U-Bolt assembly has been included to strengthen antenna mounting in windy areas. Repeat steps 1 through 4 to install.
**Antenna Installation**

The antenna should be mounted as shown in the illustration above. The included mounting bracket is adjustable and will accommodate pipe diameters from 1.25” to 2” (pipe not included). Mount the antenna so that there is at least 3 feet of clearance in all directions around it. Position the antenna so that it has the most unobstructed line of sight to the cellular service provider’s strongest signal. There is a compromise between installing the antenna as high as possible and keeping the cable run short to reduce signal loss. (The longer your cable, the greater the signal loss will be.) For cable runs of less than 20 feet (recommended), CradlePoint recommends JEFA Tech LL400 cable with N Male, SMA Male connectors (not sold by CradlePoint). CradlePoint has tested 20 and 50 foot cables from JEFA Tech and suggests using this configuration. FINGER TIGHT ONLY, Using less expensive (often higher loss) cables or using extra adapters with other cables may result in significantly reduced performance. When two antennas are used, there must be at least 1’ (12 inches) separation between the edges of the two antennas. This spacing will provide enough spatial diversity in outdoor environments for MIMO/diversity operation. Both antennas should focus the main beam in the same direction of strong cellular signal.

**Warning:** Lightning protection is recommended for all installations (not sold by CradlePoint). JEFA Tech offers one: [jefatech.com/category/cradlepoint](http://jefatech.com/category/cradlepoint). Wilson Electronics offers one compatible with this device: Wilson Part# 859988. Take extreme care to ensure that neither you nor the antenna comes near any electric power lines.

**Adjusting the Antenna for Maximum Performance**

To adjust the antenna for best performance, connect it to your router and log into the router (http://192.168.0.1) and access the modem signal strength page. Turn the Antenna in 10-degree increments while checking the signal level (dB). At each point you may need to wait a few seconds as the display updates. Signal readings appear as a negative number (for example, –86). The larger the number, the more powerful the signal (–75 is stronger than –84). Once you have obtained the strongest signal, fully tighten the mounting hardware. Disconnect the cable and route the extension cable to the router location and reconnect. Weatherproof all connections.

**Technical Support**

30-Day Money-Back Guarantee
All CradlePoint products are protected by CradlePoint’s 30-day money-back guarantee. If for any reason the performance of any product is not acceptable, simply return the product directly to the reseller with a dated proof of purchase.

90-Day Warranty
CradlePoint antennas are warranted for ninety (90) days against defects in workmanship and/or materials. Warranty cases may be resolved by returning the product directly to the reseller with a dated proof of purchase.

Antennas may also be returned directly to CradlePoint at the consumer’s expense, with a dated proof of purchase and a Returned Material Authorization (RMA) number supplied by CradlePoint. CradlePoint shall, at its option, either repair or replace the product. CradlePoint will pay for delivery of the repaired or replaced product back to the original consumer if located within the continental U.S.

This warranty does not apply to any antennas determined by CradlePoint to have been subjected to misuse, abuse, neglect, or mishandling that alters or damages physical or electronic properties.
